

Lighting

Project: Alhambra Theatre, Dunfermline

“ Our venue is iconic in Dunfermline and so requires high-quality products that match its status as the premier venue in the city. We are pleased with the result and would not hesitate to use Gradus products again. ”

Simon Fletcher,
Alhambra Theatre Representative

Gradus, a contract interior specialist, has installed LED Step Lighting at the historic Alhambra Theatre in Dunfermline. The theatre, which recently celebrated its centenary, has undergone a refurbishment, which involved the use of several Gradus products to enhance its overall aesthetic.

The Gradus ATD71L Aluminium Step Profile has been installed on the steps of the theatre, offering both upward and downward-facing illumination. This enables patrons to easily locate their seats, while also creating an attractive and inviting glow inside the theatre. In addition, the Gradus DLA45 Aluminium Architectural Lighting profile has been installed within the floors to illuminate the aisles and walkways, providing wayfinding assistance, and adding a subtle touch of elegance to enhance the theatre experience.

Both the ATD71L and DLA45 profiles were installed with Gradus's brand-new Impression LED system, featuring a 5w spotless LED tape in red. The installation process was made quick, easy and cost effective with the use of Gradus Grip GG290, a flexible fast curing adhesive with excellent gap-filling properties, eliminating the need for screw head cover plugs.

Simon Fletcher, a representative of Alhambra Theatre, expressed his satisfaction with the solutions provided by Gradus, which not only met their high-quality requirements but also enhanced the theatre's appearance while fitting seamlessly into their design scheme.

Product Specified:

- [ATD71L](#) – Aluminium step profile with a 5w red LED tape
- [DLA45](#) – Aluminium architectural profile with a 5w red LED tape
- [Gradus Grip GG290](#) – Flexible fast curing adhesive
