

When it comes to safeguarding school environments and minimising maintenance costs, it's crucial to invest in high-quality wall protection products. Areas such as corridors and circulation areas are vulnerable to daily wear and tear due to heavy traffic. To reduce damage and ensure longevity, here are some top wall protection products suitable for educational environments.

1. CORNER & WALL GUARDS

Within school environments, corners are one of the most vulnerable parts of a building and when left exposed are often damaged from everyday school traffic, where students and their bags knock into wall corners, causing preventable damage. Corner guards are ideal for reducing maintenance costs and maintaining interior appearances and can be combined with other Gradus protection products to provide a complete solution. Gradus corner guards are available in a variety of material types, styles and heights to suit all building requirements.

Wall Guards and Wall Strips play a key role in safeguarding walls from potential impact damage.

In classrooms, especially for younger students, walls are vulnerable to damage from chairs, desks, and other objects. To protect them, we strategically place Wall Guards and Wall Strips at the right heights and locations where impact is likely. This not only preserves the aesthetic appeal of the learning environment but also enhances student safety.

2. WALL CLADDING

Wall cladding serves as a robust and protective covering, crafted to shield large wall surfaces against damage, typically resulting from foot traffic and objects such as chairs and desks. Gradus provides a variety of wall cladding options encompassing a diverse selection of materials, colour palettes, and finishes, which can be incorporated easily into most design schemes

SureProtect Endure

SureProtect Endure, a textured PVCu sheet, offers an efficient remedy for minimising the necessity of wall surface repairs. This textured sheet not only conceals the visible effects of impact and abrasion but also offers the flexibility to be used as a standalone product or in combination with other Gradus Wall Protection for a complete wall protection solution.

SureProtect Endure is versatile, as it can be tailored to various profiles, such as Rubrails, Kickplates, and Pushplates. Rubrails, in particular, provide a cost-effective means of safeguarding walls in areas prone to abrasion. Meanwhile, Kickplates and Pushplates can be seamlessly applied to new doors, contributing to the reduction of maintenance costs.

SureProtect Artworx

Gradus SureProtect Artworx is a wall cladding product designed to offer schools a tailored solution with a bespoke printed finish. It helps create stimulating and inspiring interiors in educational settings, where design is a priority, and a level of protection is still needed.

Enhance your school interiors with SureProtect Artworx which is designed to create a healthier and more visually appealing environment. Whether you're focusing on classrooms, hallways, or a peaceful staff areas the design options are limitless.

SureProtect Design

It is important for teaching staff to have some downtime, and here at Gradus we believe a calm and warm environment helps make this happen. We bring to you SureProtect Design, which is produced in several wood effects, creating a modern and stylish appearance whilst still offering excellent surface protection where aesthetics is key. Combined with SureProtect Artworx, create a completely bespoke design for a relaxing environment.

SureProtect Pure

Another busy area of a school that requires protection is the canteen area. For this area SureProtect Pure should be specified. This product is specifically developed for areas such as this where cleanliness is a priority, allowing for a quick and efficient clean down each time food is prepared.

Available in 21 different colourways, to help suit design needs, use SureProtect Pure as a splashback within the kitchen area as it has a smooth and easy to clean surface.

3. EXTERIOR PROTECTION

Lets not forget building exteriors. The key safety requirements here is primarily pedestrian based. On the entrances, exits and throughout your car park, ensure you have speedbumps to help control the speed of vehicles entering and leaving your premises.

Another key part of external protection are floor mounted, which are designed to protect the building exterior and entrances from impact. Key for a school environment as using these at entrances help to prevent doors from swinging open in the wind.
