

leisure

PROJECT:
THE SPA BRIDLINGTON,
EAST RIDING OF YORKSHIRE

Gradus expansion joint covers

Product Specified: CP801L

Material Specified: Polished Stainless Steel

Application:

Gradus stainless steel expansion joint covers were installed around the dance floor in the main Royal Hall at The Spa Bridlington. Designed to provide a bridge to cover expansion joints, the profile protects the hall's flooring and offers a neat finish whilst allowing for linear expansion and movement caused by heat and moisture.

Re-opened in 2008, The Spa Bridlington, an East Riding of Yorkshire Council building, is the flagship project in the £15.5 million Bridlington Regeneration Strategy. The refurbished landmark has retained its classic 1930s ballroom and Edwardian theatre, whilst introducing state-of-the-art technology and modern new facilities.

Ruth Puckering, Marketing Officer for The Spa Bridlington, comments:

"The Royal Hall is an iconic part of The Spa Bridlington and will be hosting concerts and events attended by thousands of people. It was therefore crucial that our flooring would maintain its appearance but more importantly, that it would be free of any trip hazards caused by expansion and movement. Gradus' expansion joint covers will perform this important aesthetic and safety role."
