York College - Lecture Theatre Stair Edging Installation

“ This installation is a standout example of what can be achieved with our stair edging, even when project time constraints are slim. The accuracy, the finish, and the attention to detail across every tier really elevate the space. ”

Judy Broda,
Area Sales Manager

York College required a stair edging solution for its main lecture theatre that would deliver safety, accessibility, and long-term durability in one of the busiest teaching spaces on campus. As a venue used daily for lectures, presentations, open days and events, the theatre needed a product that would perform reliably while supporting confident movement for students, staff, and visitors.

Gradus supplied ELA91150 Aluminium Stair Edgings from the Elite Aluminium range, complete with the Canvas interior insert. The profile was selected for its proven slip-resistant performance, strong visual contrast, and suitability for varied step dimensions within tiered seating.

The customer ordered stock lengths due to project urgency, all cutting and mitring was completed on site by the contractor to ensure the installation could be delivered within the shortened timeframe.

Close coordination between the flooring contractor and Gradus ensured the stair edgings integrated seamlessly with the carpeted finish. Careful and accurate on-site preparation achieved consistent alignment, clear step-edge definition, and a high-quality appearance throughout the theatre.

The completed staircase is both visually striking and highly practical. The strong contrast of the Canvas interior insert enhances visibility during busy changeovers, while the premium aluminium finish complements the modern interior. The result is a durable, long-lasting solution that supports safe movement and reflects the college's commitment to high-quality facilities.
