Project: Northumbria University, Newcastle-Upon-Tyne

“ The contractor switched the stair edging to an XT profile in order to take advantage of the latest developments in stair edging design and performance. ”

Lynette Bowden
Marketing Manager

Gradus XT stair edgings were installed on the main staircases (from ground to 5th floor) of the Law and Business School and Design School buildings, as part of the new City Campus East Project.

A profile from the Gradus aluminium G range of stair edgings was originally specified for the project, however the contractor switched the stair edging to an XT profile in order to take advantage of the latest developments in stair edging design and performance.

Based on the recommendations from BRE and the guidance in The Building Regulations 2000 Approved Document M (ADM), the XT range features an extended insert design to provide additional slip-resistance around the leading edge of the stair edging, to ensure that foot contact is always made with the slip-resistant element of the stair edging. The range also incorporates 55mm treads and both 40mm and 55mm risers to meet ADM and BS8300:2009+A1:2010 guidelines.
