Project: Legoland Discovery Centre, Trafford Centre

“ The high amount of visitors to the LEGOLAND® Discovery Centre illustrates just how important it is to specify fit-for-purpose products. ”

Chloé Taylor
Marketing Product Manager

Gradus stair edgings and matting have been installed at the UK's first Legoland Discovery Centre at The Trafford Centre, Manchester, helping to create a safe and stylish environment for visitors.

Topguard primary barrier matting, specified with single black wipers and an aluminium scraper, has been installed in the main entrance area to offer an effective, durable entrance matting solution to protect against the high levels of walked in dirt, soil and moisture. Suitable for areas subject to heavy foot traffic, Topguard helps to maintain the appearance of the surrounding flooring by disguising dirt and marks whilst improving safety by reducing the risk of slip accidents caused by wet floors.

Gradus traditional hardnose stair edgings were installed on the main staircase providing an attractive and hardwearing solution and helping to achieve an inclusive environment in line with the latest legislation and guidelines such as Approved Document M of The Building Regulations 2000, BS8300:2009 and BRE. RNRC profiles feature an extended insert design to provide additional slip-resistance around the leading edge, this ensures that foot contact is always made with the slip-resistant element of the stair edging.

Product Specified:

- Product Range: [Topguard Primary Barrier Matting](#)
- Wiper Colour: Black
- Product Range: [RNRC511](#) Traditional PVC-u Hardnose Stair Edgings
- Channel Colour: Black
- Insert Colour: Jet
