Project: Headingley Experience, Leeds

“ Our Executive Suite features dimmable lights in order to create a variety of atmospheres. Because of this, we needed an attractive and fit-for-purpose step lighting solution in order to ensure our clientele could safely negotiate the steps between each floor. ”

John Hill  
Headingley Experience General Manager

Gradus Lighting supplied and fitted Interlok Advance step profiles into the Executive Suite at Headingley Experience.

Located at Headingley Stadium, which is famous for international and domestic cricket as well as rugby league, Headingley Experience offers a range of first class facilities for conferences, banqueting, business meetings, special occasions and events.

ATD121L Interlok Advance stair profiles feature a down light to enhance the riser of the step providing an aesthetically pleasing lighting feature to complement the suites contemporary design. Installed to increase safety by equally defining the tread and the riser of the steps in both light and dark conditions, the highlighted steps help visitors and staff to identify the changes in level, reducing the risk of trips and falls.

Gradus step lighting profiles use a modular design which makes maintenance and refurbishment work easy. The step profiles were installed with full cable management to hide all wires, creating a neat finish and preventing trip hazards.

Gradus Lighting way finding systems assist in creating safe and accessible environments for all, in line with BS8300:2009+A1:2010, Approved Document M and the Equality Act 2010.
