PROJECT:
QUEEN MARY UNIVERSITY
OF LONDON

Interlok Advance Effect in Light Conditions

Interlok Advance Effect in Dark Conditions

Gradus lighting systems

Products Installed:

- AT718L aluminium stair profiles with Interlok Advance light effect in White
- Standard interior insert, colour Cloud

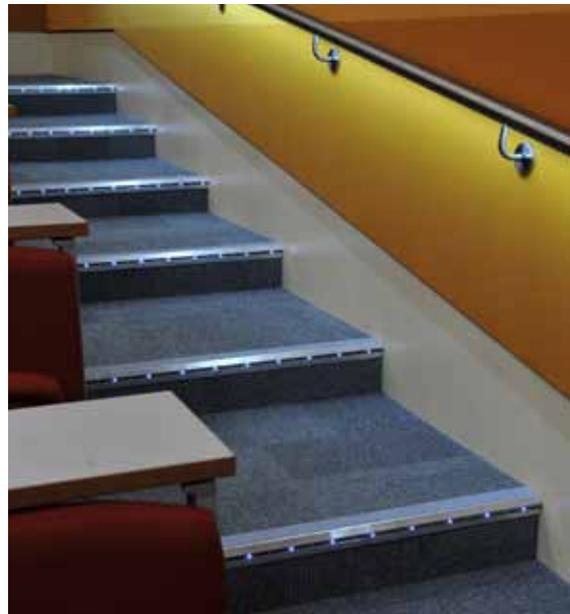

Application:

Gradus Lighting supplied Interlok Advance step profiles into the lecture theatres at the Queen Mary University London, one of the UK's leading higher education institutions.

AT718L Interlok Advance stair profiles were installed into the lecture theatres to define the edge of the steps in both light and dark conditions. The highlighted steps help students and staff to identify the changes in level, reducing the risk of trips and falls.

Gradus step lighting profiles use a modular design meaning maintenance and refurbishment work is simple. The step profiles were installed with full cable management to hide all wires, creating a neat finish and preventing trip hazards.

Gradus Lighting way finding systems assist in creating safe and accessible environments for all, in line with BS8300:2009+A1:2010, Approved Document M and the Equality Act 2010.
