

Lighting

Project: Storyhouse, Chester

“ We needed an LED lighting solution that complemented the modern, stylish appearance of the refurbished building interior, but still ensured a safe and inclusive environment.

Gradus ensured that the products selected matched our requirements and worked with us to produce a fantastic end result. ”

Nancy Davies
Marketing and PR Manager for Storyhouse

As part of a brand new, multi-million-pound restoration project, Storyhouse in Chester specified Gradus LED Lighting in its state of the art entertainment facility.

Gradus ATD71L stair edgings, incorporating the Interlok Advance LED lighting system in White, were installed in the theatre and cinema to create a pinpoint lighting effect across each step. This enhances the safety of the building by providing a clear, defined edge for users ascending and descending the staircase in low light conditions.

ATD71L stair edgings comprise hardwearing, aluminium channels with a 6mm gauge, and incorporate PVC-u tubes that house the LED lighting and clip securely into the channels. The lighting system is finished with end caps ensuring all cables are hidden, providing a neat finish.
