

GRADUS

Project: International Plywood, Gloucester

Case Study

Commercial Office

When International Plywood set out to upgrade its Gloucester HQ, the focus was on high-performance interior products that could withstand heavy use while elevating the aesthetic. Gradus delivered across the board, supplying and supporting the installation of its market-leading solutions.

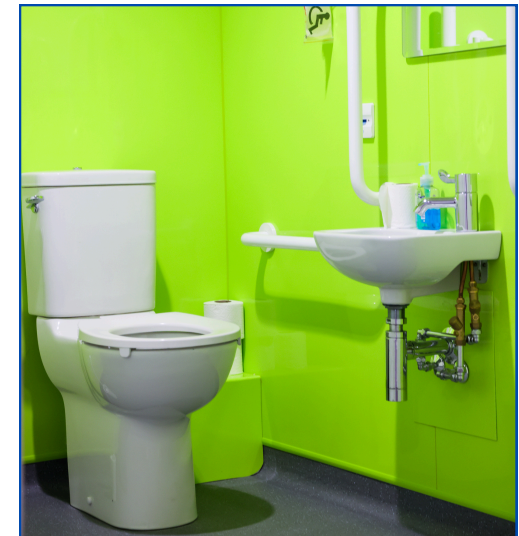

Entrance Matting: Staff and visitors are welcomed by Gradus's Mat-in-a-Box - a modular entrance system designed for efficient dirt and moisture capture. Its quick-install design ensured minimal disruption while offering a clean, integrated look that stands up to high footfall.

Stair Edgings: Safety and style were addressed with a dual approach: XT stair edgings were installed on the main staircases, providing superior slip resistance and high visibility.

BasicZ edgings were fitted to secondary stairwells, offering cost-effective protection with a clean finish. These combined installations created a cohesive stair safety system across the facility.

Wall Protection: In washroom and shower areas, SureProtect Pure wall cladding was installed to enhance hygiene and durability. The cladding's easy-clean surface and colour-matching flexibility made it ideal for the project, helping maintain a sleek and sanitary environment.

Integrated Flooring & Accessories: Working jointly with Gerflor, Gradus ensured all finishes were compatible. The installation of Creation 55 Looselay and Mipolam Planet flooring lines was seamlessly coordinated with Gradus trims and accessories—delivering a complete, technically aligned interior fit-out from one trusted source.

“The ability to specify wall protection and stair accessories alongside flooring finishes streamlined the process, giving us the technical performance and visual impact we were after. It was a pleasure to work with a team who truly understood the vision.”
