Project: Theatre Royal, Haymarket

“ We felt that stair lighting in the auditorium was an absolute must and asked our architect to specify the best products to meet our needs. The entire project went incredibly smoothly and we are very happy with the finished result. ”

Mark Stradling
The Haymarket's Theatre Manager

Gradus Lighting supplied and fitted Interlock Advance step lighting into one of the most spectacular theatres in the West End of London, which is renowned for its architectural splendour.

The RNT718L step profiles with Interlock Advance light effect were installed into the unique theatre to define the steep steps, especially when the theatre is dimly lit, and to help customers identify changes in level whilst also complimenting the theatres existing interior.

Standard interior insert in Glacier was used to create 30 LRV points difference with the dark floor covering, further defining the step edge as well as providing superior slip-resistance underfoot.

Gradus Lighting way finding systems assist in safe and accessible environments for all, in line with BS8300:2009, Approved Document M and the Disability Discrimination Act.

Product Specified:

- [RNT718L](#) Clear PVC-u stair edgings with [Interlock Advance](#) light effect in Blue
- Standard interior insert, colour Glacier
