

Lighting

Project: VOX Cinemas, Yas Mall, Abu Dhabi

“ Gradus Lighting systems offer a range of safety & decorative lighting profiles for stairs that have been designed specifically to suit interior environments such as cinemas, where light is required for safety to protect the public from slips, trips & falls. ”

Neil Thompson
Group Marketing Director

Gradus supplied Continuity step lighting and Decorflex LED flexible lighting to the state-of-the-art 20 screen cinema at Yas Mall, Abu Dhabi, operated by VOX Cinemas, the leader in the concept of luxury cinemas.

RNT1218L stair edgings, featuring continuity lighting, were used to define the edge of all stairs in the cinema screens, assisting customers and staff to identify changes in level and helping to reduce the risk of slips and trips on stairs. The clear PVC-u stair edgings allow light to project through the profiles so it is visible when both ascending and descending the stairs.

Decorflex LED flexible lighting creates unique and interesting designs, installed in amber, red, white and blue. Decorflex was used on the walls and, in some screens, was also featured around the edge of the wall panels, creating a unique, back lit, design which coordinates with the Continuity step lighting and the cinemas seats which were provided by Camatic Pty Ltd.

Products Specified:
