

450 Timber Handrail

Data Sheet: (Sheet 1 of 1 BB March 2024)

This leaflet has been compiled to help the user obtain optimum performance and satisfaction from their selected product.

Preventative Maintenance Programme

A regular scheduled maintenance programme should be employed to prevent the build up of dirt and grease, which will detract from the overall appearance of the product.

Upon completion of installation, all timber surfaces should be checked and thoroughly cleaned to remove any adhesive or spot marks. (Remove excess adhesive with methods and materials recommended by the adhesive manufacturer).

Twice Weekly

To avoid heavy build-up of soil, the timber profile should be periodically cleaned. It is recommended that this operation be carried out using soap less neutral detergent in warm water and rinsing with clean water using a soft cloth.

After cleaning, dry thoroughly with a lint free cloth.

Regular cleaning in the prescribed manner will maintain the appearance of the product.
