Gerflor & Gradus – The Healthcare Specialists

With over 100 years' of combined experience in the healthcare sector, together we have built an unrivalled reputation for quality and service.

The **Gerflor group** is well known as a credible and valued supplier of complete flooring solutions designed specifically for the healthcare market. The constraints of hygiene, slip resistance and acoustic qualities are part of mandatory characteristics for this sector. Our expertise allows us to offer numerous flooring products suitable for all areas of a healthcare facility. Whilst maintaining the technical performance and the design aspect of our floorcoverings, we manufacture our ranges with the environment in mind, as well as the health and wellbeing of end users. We have recognised brands ideal for healthcare facilities, including our Mipolam, DLW, Taralay, Taraflex and Tarasafe flooring ranges.

Gradus is a UK manufacturer of contract interior solutions, these include wall protection, stair edgings, floor trims, barrier matting and LED lighting. As the largest UK Manufacturer of Wall Protection we are able to offer a comprehensive range which includes textured wall cladding, hygienic cladding, handrails, dual rails, combination rails, wall guards, corner guards, bed protectors and door protection. Gradus control the design of profiles from initial concept through to finished products including specialist CAD design and the manufacture of tooling. This ensures that quality is maintained and provides customers with an efficient, flexible, and fast service. We also offer a project management and installation service for our wall protection systems.

Many years understanding the Healthcare sector has shown us the key considerations required to deliver a successful contract interior project...

Infection prevention is key

Gerflor's patented flooring surface treatments and unique clean corner system, facilitate quick and efficient cleaning to prevent the spread of infections. Whereas Gradus' Sure Protect Pure wall cladding, a non-porous material prevents bacterial and viral growth, an additional layer of protection against infection.

The importance of design on patient wellbeing

The design of hospital walls and floors can play a significant role in the healing process of patients. Bright, welcoming colours and designs can create a calming and comfortable environment that can lead to faster recovery times. Gerflor and Gradus are uniquely positioned to be able to provide protective and attractive solutions for both floors and walls.

Reducing the risk of slips, trips and falls

According to the Health and Safety Executive (HSE), slips and trips account for over a third of all major injuries in the workplace. Gerflor flooring has been developed to offer excellent slip resistance. Gradus' uniquely designed stair edgings also play a crucial role in preventing slips, trips and falls on stairs.

Reducing life cycle costs

Healthcare facilities are highly active environments with frequent movement of both equipment and people, necessitating the use of durable and easy-to-maintain materials. To address this need, Gerflor offers flooring products made from top-quality materials. Additionally, Gradus wall protection can play a significant role in reducing a buildings life cycle costs by decreasing maintenance and repair expenses.

Sustainability

Gerflor and Gradus offer a range of environmentally friendly flooring, wall covering, and accessory solutions that incorporate recycled materials, are recyclable at the end of their life, and are both durable and low maintenance. These products and sustainable initiatives play a crucial role in supporting the transition towards a net-zero UK healthcare sector.

DSDC Accreditation

The Dementia Services Development Centre have undertaken a review of some product ranges contained within this document, and have rated their design and usability within a dementia-inclusive environment as either as Class 1a or 1b. Look out for the DSDC logo.

Our tried and trusted Healthcare Solutions

Interactive Healthcare Brochure

Gerflor Services

Technical & Specification Support Specialists

Gerflors' dedicated healthcare specialists can assist you with all your specification needs. Whether it's a new build or refurbishment project we have the expertise and innovations to meet all budgets. Hand in hand with our partners, we work together to propose the optimum solution for the client's needs, utilising the most appropriate safe, hygienic and sustainable solutions for the specific applications. We don't stop at just providing specification advice, we can also provide a free site survey, we will visit, assess and audit the facility and make improvement suggestions to future proof the building interiors.

The Technical Support team is available to offer advice on the specification and installation of products, including guidance on the latest healthcare building standards and legislation. Be rest assured that Gerflor has a world-class pedigree of products that are tried and trusted and deliver every time. All backed up by a network of technical, specification and customer support teams.

Sampling Support Services For Every Need

We offer a free sample service for all our healthcare clients. Whether it's a range overview binder, loose sample (standard or bespoke), supporting literature or if it is something bespoke you need like a mood board or test material, contact us and we will aim to supply the sample for your required need. To request a sample, literature or anything else, email contractuk@gerflor.com or call 01625 428922

Local Stock for Healthcare Best Sellers

Gerflor have stock in place locally in the UK for our best selling healthcare ranges. A new warehousing and distribution facility based in Winsford offers a broad range of in-depth stock to provide an enhanced service level to our customers. Essential when time is of the essence and our customers need innovative products and fast delivery for those essential quick turn around projects. Speak to our healthcare specialists for stock availability or any further information needs.

Specification Documents and BIM Objects

Bringing together NBS BIM Library, NBS Plus and Product Selector, NBS Source is a brand new tool that creates a single source for product information and incorporates the Gerflor products. NBS Source provides an additional level of enhanced product data, in a consistent, structured format that will integrate seamlessly into your project workflow.

Alternatively you can also access Gerflors' BIM objects for all resilient and linoleum floorings on the National BIM Library.

Gradus Services

Wall Protection Contracts Team

The Gradus Contracts service has provided peace of mind for contractors and clients throughout the design, tender and delivery stages of numerous projects. A dedicated project team will support you from initial enquiry and specification to site survey and manufacture in our Cheshire facilities, all the way through to installation and final account.

Our directly employed Wall Protection installation team together with our supervisors and project managers all carry CSCS cards and SSSTS accreditations, with our supervisors and projects managers carrying SMSTS as a minimum. Our in-house health and safety management promotes a culture of working proactively and safely with the considerations of others and the environment around us paramount.

With customers ranging from designers and architects to main contractors and building owners, you can trust Gradus to provide a high-quality installation on time, on a budget, and to an exceptional standard first time, ensuring that your building remains a protected and sustainable environment for years to come.

Technical Support

The Technical Support team is available to offer advice on the specification and installation of products, including guidance on the latest building standards and legislation.

Sampling Service

We offer a free sampling service for all our products. Contact our Technical Support Department on 01625 428922.

CPD's

Gradus is one of the original members of the RIBA CPD Providers Network and currently offers a full range of RIBA assessed and approved CPD seminars covering:

The Specification & Design Considerations of Stair Edgings

The Specification & Design Considerations of Wall, Corner & Door Protection Systems

The Specification & Design Considerations of Barrier Matting Systems

All seminars are part of the RIBA core curriculum syllabus.

For further information contact Gradus Technical Support on 01625 428922 or visit www.gradus.com

Procure 23

Our Wall Protection products have been awarded a supplier ProCure 23 certificate, as part of the Efficiency and Productivity Programme. We have successfully demonstrated that our wall protection products met the stringent criteria, via the tender process, for innovation, sustainability, quality, and value for money.

BIM for Wall Protection and Accessories

Gradus BIM objects provide up-to-date, accurate data on our XT stair edgings and wall protection products providing you with the relevant technical information to build into your projects. You can download our BIM objects free of charge by visiting our page on NBS Source.

Comprehensive Healthcare Solutions

The Gerflor & Gradus ranges are both hygienic and safe, our solutions are suitable for all areas of the healthcare facility.

Entrance & Reception Areas

Key considerations when selecting Flooring and Wall Protection products for Entrance & Reception Areas

- ✓ A bright, calm and welcoming environment
- ✓ Resistance to heavy traffic
- ✓ Good slip resistance on floors
- ✓ Practical in design to facilitate building access
- ✓ Protecting walls and corners that are vulnerable to damage
- ✓ Zoning and navigation assistance

Resilient Flooring

Taralay Premium Compact

Perfect for extreme traffic resistance, comes with the Evercare surface treatment for an unrivalled level of chemical and stain resistance.

Wall Protection

Selecting the right product

Entrance & reception areas are often subject to scuffs and scrapes from tables, chairs and other moveable objects. Corners & edges are also vulnerable to damage from deliveries and other wheeled traffic entering the building.

Corridors

Key considerations when selecting Flooring and Wall Protection for Corridors

- ✔ Selected products need to deal with heavy traffic both pedestrian and wheeled
- ✔ Products should offer zoning and navigation assistance
- ✔ Flooring must be slip resistant and be able to cope with heavy rolling loads
- ✔ Robust Wall Protection system to protect vulnerable walls and corners
- ✔ Handrails for guidance and support

Wall Protection

Selecting the right product

Corridors and circulation areas are amongst the busiest parts of a building and often have to deal with a heavy flow of both pedestrian and wheeled traffic, which then filters into other parts of the building. This high level of activity often requires a robust protection system in place to protect vulnerable walls and corners from scuffs and scrapes and direct impact damage.

Wall Protection

Selecting the right product

Ward and hospital accommodation is subject to high volumes of activity. Hospital staff are regularly tasked with manoeuvring beds, wheelchairs, mobile medical equipment, service trolleys and other wheeled traffic in relatively confined spaces, increasing the likelihood of impact damage to walls, corners and doors.

Key considerations when selecting Flooring and Wall Protection for Kitchens

- Good slip resistance
- Resistance to heavy traffic
- Quiet and comfortable underfoot
- Easy clean walls and low-cost maintenance
- Smooth and impervious walls to maintain food hygiene standards

Wall Protection

Selecting the right product

Commercial kitchens and food preparation areas require frequent and thorough cleaning to maintain food hygiene standards. Smooth and impervious surfaces are recommended for kitchen walls as an alternative to traditional ceramic tiles and grouting that can harbour bacteria and crack under impact.

Imaging Areas

Key considerations when selecting Flooring and Wall Protection products for Imaging Areas

- ✓ A bright, calm and welcoming environment
- ✓ Limits electrostatic charge
- ✓ Quiet and comfortable underfoot
- ✓ Low resistance to rolling loads
- ✓ Impervious surfaces that are smooth and easy to clean
- ✓ Protect walls from damage caused by mobile medical equipment

Wall Protection

Selecting the right product

Mobile equipment is frequently moved around in imaging areas increasing the potential for damage. These areas require impervious surfaces that are smooth and easy to clean with a resistance to impact damage.

Physiotherapy Areas

Key considerations when selecting Flooring and Wall Protection products for Physiotherapy Areas

- ✓ A bright, calm and welcoming environment
- ✓ Products that promote hygiene and infection control
- ✓ Quiet and comfortable underfoot
- ✓ Easy clean and low maintenance products
- ✓ Protect walls and corners from damage caused by mobile equipment

Wall Protection

Selecting the right product

Patients are regularly wheeled in an out of physiotherapy areas which risk gouging wall surfaces if a collision were to occur. Wall and corners need to be protected from impact damage.

Laboratories

Key considerations when selecting Flooring and Wall Protection for Laboratories

- ✓ Hygiene and infection control
- ✓ Resistance to stains and chemicals
- ✓ Good slip resistance
- ✓ Quiet and comfortable underfoot
- ✓ Easy clean and low-cost maintenance

Wall Protection

Selecting the right product

Strict hygiene standards in laboratories require robust building materials that can withstand extensive cleaning. Mobile trolleys are frequently moved around increasing the potential damage to walls and corners.

Key considerations when selecting Flooring and Wall Protection products for Pharmacies

- ✓ Good slip resistance
- ✓ Quiet and comfortable underfoot
- ✓ Excellent resistance to rolling loads
- ✓ Easy clean and low maintenance
- ✓ Smooth and impervious walls that can withstand extensive cleaning regimes
- ✓ Protect walls from mobile equipment that can cause damage

Wall Protection

Selecting the right product

Strict hygiene standards in pharmacies require robust building materials that can withstand extensive cleaning. Mobile trolleys are frequently moved around increasing the potential damage to walls and corners.

Key considerations when selecting Flooring and Stair Edging products for Healthcare environments

- ✓ Slip Resistance properties – select insert suitable for the environment
- ✓ Cleaning & Maintenance – ability to withstand harsh regimes
- ✓ Colour Contrast – achieve 30 points LRV difference between stair edging & floorcovering
- ✓ Fixing Method – install with Gradus Grip stair edging adhesive for a hygienic solution

Stair Edgings

XT™ Aluminium Stair Edgings

XT aluminium stair edgings offer the ultimate solution in reducing slips, trips and falls on stairs. Ideal for hospital environments where more intensive cleaning is required.

- 1 XT Aluminium Stair Edgings - [click here](#)

- Inserts available in Interior & Xtra-Grip
- Unique locking mechanism offers improved performance
- Slip-resistant insert extends around the leading edge of the profile, reducing the risk of slips, trips or falls
- Now includes 8 wide channel options

Resilient Flooring

Tarasafe Ultra

Outstanding safety flooring where slip-resistance, durability and hygienic conditions are required, meets +36 HSE guidelines.

7482 Halite

Back of House Storage Areas

Key considerations when selecting Flooring and Wall Protection for Back of House Storage Areas

- ✓ Resistance to heavy rolling loads
- ✓ Resistance to heavy traffic
- ✓ Easy clean and low-cost maintenance
- ✓ Robust wall protection solution to protect the building from damage and improve safety for pedestrians

Wall Protection

Selecting the right product

Wheeled traffic such as industrial bins and carts can cause significant damage when accidental collisions occur. Motorised traffic including delivery vans and motorised trolleys are also potential hazards in service areas.

Solution: ASXT20 Aluminium XT Stair Edging. Installed with Gradus Grip, Aluminium Multi-Purpose ETR Floor Trim

Innovation, Service & Design

Surface Treatment & Cleaning

Resilient flooring surface treatments can be incredibly beneficial in hospital environments, where cleanliness and hygiene are of the utmost importance. Gerflor Evercare, ProtecSol2 and Neocare use antimicrobial agents in the resilient flooring, which can inhibit the growth of bacteria and other micro-organisms. This helps to create a cleaner and healthier environment for patients, staff, and visitors.

Additionally, these coatings make resilient flooring easier to clean, reducing the risk of cross contamination and the spread of diseases. Surface treatments also provide slip resistance, which can help to prevent falls and injuries in hospitals. This is important in areas where spills are common, such as operating rooms, laboratories, and patient rooms.

Clean Corners

Controlling contamination in healthcare facilities is always a challenge. Corners are where most issues are found, due to their shape making cleaning and decontamination difficult. If they are poorly welded, they can tear or sag under the weight of traffic, and over time they can lose their water-tightness.

In partnership with cleaning professionals, Gerflor has developed the Clean Corner System: a patent pending innovative corner solution. Years of research and development have led to this system that creates a watertight, durable and hygienic solution suitable for all Gerflor PVC floors.

Service

Gerflor is a leading provider of healthcare flooring solutions and offers technical and specification support for new builds and refurbishment projects. Their healthcare specialists work hand in hand with partners to propose safe, hygienic, and sustainable solutions that meet all budgets. Gerflor provides free site surveys, offers advice on the latest healthcare building standards and legislation, and has a network of technical, specification, and customer support teams. They also provide a free sampling service for all their healthcare clients and have local stock in place for their best-selling ranges. Gerflor's specification documents and BIM objects are available on NBS Source.

Gradus a leading provider in wall protection offers a wall protection contracts team that provides peace of mind for contractors and clients throughout the design, tender, and delivery stages of numerous projects. They also provide technical support, sampling services, and RIBA assessed and approved CPD seminars. Additionally, their wall protection products have been awarded a supplier ProCure 23 certificate and their BIM objects provide up-to-date, accurate data on their wall protection products. In addition to its other products, Gradus offers a variety of solutions for the healthcare industry, including stair edgings, entrance matting, and capping and coving products.

Supply & Fit

Gradus' wall protection supply and fit service provides a comprehensive solution for safeguarding walls in healthcare buildings. The service includes the supply and installation of corner guards, crash rails, and wall cladding, designed to withstand impact and abrasion, reducing the need for repairs and maintenance. The products come in various materials, finishes, and colours, allowing for customisation to suit any interior design scheme. With a team of experienced installers, Gradus ensures products are fitted to the highest standards, providing maximum protection and a seamless finish. The expert advice and guidance supports customers to choose the right products for their specific needs, ensuring compliance with safety requirements and building regulations.

Colour Contrast

Colour contrast and light reflectance value (LRV) are essential considerations when it comes to achieving building standards in the UK and promoting inclusive design. Colour contrast refers to the difference in colour between two adjacent surfaces, while LRV measures the amount of light a surface reflects. By using either high-contrast colours and LRVs that meet the recommended standards (30 points difference between floors and walls) or similar tonal colours (8-point difference between adjoining floor coverings), designers can create spaces that are safer and more accessible for all users. For example these factors can significantly impact how people with visual impairments navigate and perceive spaces. This approach can also help buildings meet legal requirements for accessibility, such as those outlined in the Disability Discrimination Act (DDA) and Building Regulations Part M.

Design

Good design can play a crucial role in creating a healing environment for patients in hospitals. When it comes to walls and floors, it's important to consider both the aesthetics and functionality of the design. For instance, soothing colours and patterns on walls and floors can help to reduce stress and anxiety for patients, promoting a sense of calm and comfort.

In addition, inclusive design should also be considered in hospital design. This means designing with the needs of all patients in mind. For example, non-slip flooring can help to prevent falls, while tactile surfaces can assist patients with visual impairments.

Overall, thoughtful design choices in hospitals can have a significant impact on patient recovery and well-being, making it an essential aspect of healthcare design. Gerflor and Gradus offer a unique combination of floor and wall coverings. By using our innovative specification tool and service, specifiers can design healing and inclusive spaces with ease.
